Prior Art

1. The following prior art made of record and not relied upon is considered pertinent to applicants' disclosure: U.S. Patent Nos. 6,696,235 and 6,395,464.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

While the prior art would make obvious the silver halide radiographic element comprising a support having thereon at least one silver halide emulsion layer comprising a silver halide emulsion comprising tabular grains having each of the claimed average thickness, average diameter and aspect ratio values, said art does not, in fact, disclose or teach such tabular silver halide grains further characterized by having a coefficient of thickness variation and a coefficient of diameter variation as claimed by applicants. Applicants have clearly demonstrated herein the specification that significant unexpected photographic advantages with respect to speed and contrast are realized with the inventive silver halide radiographic element containing the inventive silver halide tabular grain emulsion characterized by the combination of the claimed thickness, diameter and aspect ratio, WITH a coefficient of thickness variation less than twenty-five percent AND a coefficient of diameter variation within the range of thirty-one to forty-four percent, versus comparative samples containing a coefficient of diameter variation less than thirty-one percent, or comparative samples containing a coefficient of thickness variation greater than twenty-five percent.
